LB 1220	234	12.200	91	160	4000

The AP loading ramp is a simple loading platform with which all kinds of goods can be loaded in a container / truck quickly and efficiently.

The loading ramp is steplessly adjustable in height by means of a hydraulic handpump. Because of the solid construction and the galvanized heavy duty grates the AP loading ramp consists of a large loading capacity.

The AP loading ramp is available in two standard models, mentioned above. Naturally it is also possible to deliver different measures, completely built at customer's choice.
